

# BAE Systems Delivers Firepower to USMC with New Amphibious Combat Vehicle Test Variant

BAE Systems delivered a new Amphibious Combat Vehicle 30mm Cannon variant to the U.S. Marine Corps for testing. *BAE Systems*

STAFFORD, Virginia – BAE Systems delivered the first production representative test vehicle (PRTV) of the new Amphibious Combat Vehicle 30mm Cannon (ACV-30) variant to the U.S. Marine Corps for testing.

“ACV-30 equips dismounted Marines with direct fire support allowing them to simultaneously find, fix and engage targets more effectively and efficiently than current systems,” said Garrett Lacaillade, vice president of the amphibious vehicles product line for BAE Systems. “Innovating for the future, consistent with Force Design 2030 priorities, we have teamed with our strategic partners Iveco Defence Vehicles, Kongsberg and the Marine Corps to deliver not only an incredibly lethal capability, but a vehicle and weapon system that has the growth potential to incorporate new technologies to defeat future threats.”

ACV-30 is the third variant in the ACV family of vehicles designed, developed, and built since BAE Systems was selected as the prime contractor for the program in 2018. The vehicle mounts a stabilized, medium caliber Remote Turret System manufactured by Kongsberg that provides the lethality and protection Marines need while leaving ample room for troop capacity and payload while keeping the crew under armor. The remote turret eliminates the space requirement of legacy

turreted cannon systems and provides more room to transport troops or mission essential equipment, and reduces weight for better mobility, the company said.

BAE Systems is currently in full-rate production with the ACV Personnel (ACV-P) variant and ACV Command and Control (ACV-C) variant, and is on contract for the design and development of an ACV Recovery (ACV-R) variant which will provide direct field support, maintenance and recovery to the ACV family of vehicles.

Each customizable ACV variant in the family of vehicles provides true open-ocean and ship-to-objective capability, land mobility, survivability and growth potential to meet the evolving operational needs of Marines around the world.

ACV production and support take place at BAE Systems locations in Stafford, Virginia; San Jose, California; Sterling Heights, Michigan; Aiken, South Carolina; and York, Pennsylvania.
