SEATTLE – New Zealand received the first of four Boeing P-8A Poseidon maritime patrol aircraft in a Dec. 7 ceremony at the Museum of Flight, Boeing said in a release.

“As a maritime nation, delivery of the P-8A will ensure New Zealand maintains a patrol and response capability that will protect and support law enforcement in our Exclusive Economic Zone and Southern Ocean,” said Sarah Minson, acting deputy secretary for Capability Delivery, New Zealand Ministry of Defence. “The P-8A will also assist our South Pacific neighbors and deliver long-range search and rescue capability.”

The milestone comes four years after the New Zealand Government entered into an agreement with the U.S. Navy for the P-8A.

“The unmatched, multi-mission maritime patrol capabilities of the P-8 will provide New Zealand the ability to extend their reach into the Pacific and beyond,” said Philip June, vice president and program manager, P-8 Programs. “New Zealand joins eight other global customers including nearby Australia that have selected or already operate the P-8 and benefit greatly from its long-range maritime surveillance and warfare capabilities.”

Boeing Defence Australia will provide sustainment services for New Zealand's fleet with the support of the P-8 International Program.

New Zealand's three remaining P-8 aircraft are all in advanced stages of production and will be delivered in 2023. The

aircraft will replace New Zealand's current fleet of six P-3K2 Orions and will be based at Royal New Zealand Air Force Base Ohakea.

To date, the global operating P-8 fleet has amassed more than 450,000 mishap-free flight hours. The P-8 is a long-range anti-submarine warfare, anti-surface warfare, intelligence, surveillance and reconnaissance aircraft capable of broad-area, maritime and littoral operations. In addition, the P-8 performs humanitarian and search and rescue missions around the globe.
