

Cubic Teams with Carley to Enhance Navy Fleet Readiness, Support Training Modernization

SAN DIEGO – Cubic Corp. has been awarded a subcontract by Carley Corp. under its prime contract for the U.S. Navy's Sailor 2025 Ready, Relevant Learning fiscal 2022 content conversion contract, the company announced in a June 2 release.

As part of the agreement, with support from Cubic, Carley will deliver training content to include designing, developing and delivering modernized training content, including courseware training products for multiple Navy ratings. The content will be provided to Sailors over the course of their career-long learning continuum.

"It is an honor to continue to deliver modernized training content to our Sailors at the point of need," said Mike Knowles, president of Cubic Mission and Performance Solutions. "This is the third contract award for the collective Carley-Cubic team and demonstrates the Navy's continued confidence in our ability to deliver operationally relevant training to our Sailors and the fleet."

As part of its work with Carley, Cubic will utilize innovative instructional systems design, systems engineering, and training assessment approaches in conjunction with new technologies to support ratings-accession training. This will simultaneously support the S2025 overarching goal of improving Sailors' transfer of training to the operational work environment.

The Navy's S2025 program is designed to improve personnel

management and training systems to effectively recruit, develop, manage, reward, and retain future forces. The Ready, Relevant Learning pillar is a long-term investment in the improvement of individual Sailor performance and enhancing fleet readiness.

Work will be performed in Orlando, Florida, and is expected to be completed by March 2027.
