LOS ANGELES – Northrop Grumman Corp. successfully completed the third live fire test of its AGM-88G Advanced Anti-Radiation Guided Missile Extended Range (AARGM-ER), the company said July 21.

The U.S. Navy launched the missile from an F/A-18 Super Hornet aircraft recently at the Point Mugu Sea Range off the coast of California. Utilizing its advanced emitter acquisition system, the missile detected a land-based threat and engaged the threat system.

“The Navy requirement for AARGM-ER is now,” said Captain A.C. Dutko, Navy program manager for Direct and Time Sensitive Strike (PMA-242). “AARGM-ER performed as expected and detected, identified, located and engaged a land-based air defense radar system. The continued success of our developmental testing moves the program closer to fielding and providing the aircrews with the protection they need to remain ahead of adversary threats.”

Since achieving a Milestone C Decision in September 2021, AARGM-ER prime contractor Northrop Grumman has continued to lead its industry team in timely development of critically needed warfighting capability. LRIP Lot 1 AARGM-ER missiles are currently in-production to support initial operational capability fielding. LRIP Lot 2 missiles, under contract, will further augment the inventory in the fleet.

AARGM-ER is being integrated on the Navy F/A-18E/F Super Hornet and EA-18G Growler aircraft as well as the F-35

aircraft.
