

# Royal Netherlands Navy Successfully Integrates SeeByte's Neptune into Remus 100

EDINBURGH, Scotland – The Royal Netherlands Navy (RNLN) has successfully integrated SeeByte's Neptune into its New Generation Remus 100 fleet, the company announced in a Sept. 28 release.

The vehicles are equipped with SeeByte's goal-based mission planning and autonomy engine software to expedite and optimize single and multivehicle operations.

"We are privileged to be in a position to continue working with The Royal Netherlands Navy and assist in their goal to achieve security at and from the sea," said Alastair Cormack, SeeByte's technical client manager. "With the U.S., U.K. and Canadian navies currently using Neptune software, it is fantastic that the RNLN will now have access to the advanced capabilities we offer."

Neptune can be used to coordinate fleets of unmanned assets for mine countermeasures missions enabling operators to easily coordinate various assets to search, classify and map, reacquire and identify operations as part of a single mission. By combining all the mission plans and monitoring in a single work station and user interface, teams are able to manage larger fleets of unmanned assets without putting additional strain on the operators.
