

Saab Awarded Contract for Carl-Gustaf Recoilless Rifles for Army, Marine Corps

Carl-Gustaf M4 in arctic environment with AFCD from SENOP. Saab STOCKHOLM – The U.S. Army MAAWS Program Office has awarded Saab a contract for Carl-Gustaf M4 recoilless rifles for the Army and Marine Corps. The Carl-Gustaf rifles are also known as Multi-purpose Anti-Armor Anti-personnel Weapon System (MAAWS) and M3A1 in the U.S. Army. The order will include deliveries of weapons for both the Army and the US Marine Corps. The contract has a total value of USD 16 million and is awarded under a current ID/IQ agreement.

Saab will provide Carl-Gustaf recoilless rifles to continue supporting the ongoing fielding effort in both the Army and the Marine Corps.

“At Saab, we are always striving to support the Infantry with light-weight solutions that make their jobs easier. This order will make Soldiers and Marines more agile thanks to the reduced weight and increased capability compared to the previous version currently in operational use. Additionally, this order will increase interoperability across services, alliances, and partnerships, with so many already fielding the Carl-Gustaf M4,” said Erik Smith, president and CEO of Saab in the United States.

Carl-Gustaf M4 increases tactical flexibility, enabling soldiers to deal with any situation. Built to satisfy future requirements, it is compatible with advanced fire control devices and prepared for specialized ammunition, putting advanced technology at forces’ fingertips. The wide range of ammunition provides extreme tactical flexibility ready for any

combat situation, delivering faster engagement, increased hit probability and greater effectiveness.

The Carl-Gustaf system of lightweight weapons, now in its fourth generation. It is in use in more than 40 different countries, including many NATO allies.
