

SM-6 Missile Fired from Deck of LCS

Release from Commander, Naval Surface Forces

SAN DIEGO – USS Savannah (LCS 28) conducted a live-fire demonstration Oct. 24 in the Eastern Pacific Ocean utilizing a containerized launching system that fired an SM-6 missile at a designated target, according to Cmdr. Arlo Abrahamson, spokesperson for the Naval Surface Forces. The exercise demonstrated the modularity and lethality of Littoral Combat Ships and the ability to successfully integrate a containerized weapons system to engage a surface target. The exercise will inform continued testing, evaluation, and integration of containerized weapons systems on afloat platforms.
