

U.S. Navy Selects NCI for \$13.4M NAVAIR Fiber Optic Network Modernization

RESTON, Va. – NCI Information Systems Inc. announced Feb. 8 it has received a five-year, \$13.4 million prime contract from the U.S. Naval Air Systems Command Naval Air Warfare Center, Weapons Division.

Under the Installation Fiber Optic Networking Support Services contract, NCI, with its partner IntelliBridge, will enable faster, more secure network connections for the Navy by delivering state-of-the-art engineering and implementation fiber optic networking support services.

“The operational readiness and survivability of today’s warfighters are more closely tied to the speed and security of network technology than at any time in our nation’s history,” said Paul A. Dillahay, president and CEO of NCI. “We are honored to partner with IntelliBridge on this program to support the Navy with better, faster and more secure connectivity to support fleet modernization and mission readiness at sea.”

Under the contract, NCI and IntelliBridge will transform system interoperability and integration for networks supporting NAWCWD and NAVAIR, enabling seamless and secure computer connectivity. The two organizations will provide E&I fiber optic networking support services such as state-of-the-art network designs, fiber builds, infrastructure mapping and networking solutions.
